

# SOLARAI

## EB Switch

The Solarai EB switch provides users with a means to manual override their control system. By combining the provided buttons and blanks, the switch can be configured to have anywhere from 1 to 7 momentary buttons. This configurability allows the switches to be used as a multi channel device, incorporate multiple motor stop positions, or initiate different states from a single switch.

The positive button feedback provided by each button allows users to know when a button has been pressed and released.

## Features

### Configurable

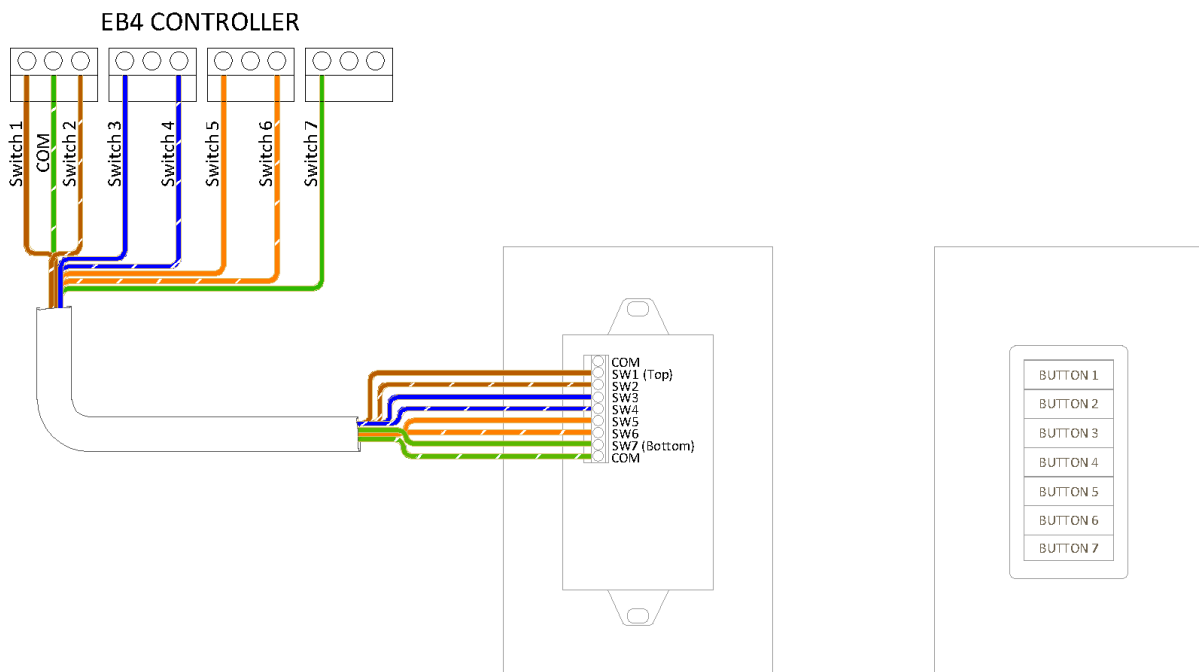

Switches can be customized to have 1 through 7 buttons.

### Universal

Rectangular shape fits readily available third party face plates

### Feed Back

Tactile feedback confirms to users that switch contact has been pressed.
